

LED Bulbs

Logo Lites LED Light Bulbs are made to fit into the original headlight or bulb sockets with no modifications to your antique car or truck. Our LED light bulbs draw significantly less current than incandescent or halogen bulbs. Your dim old bulbs are easily replaced with Logo Lites bright white, long lasting LED light bulbs in *seconds*. Order your Logo Lites LED Light Bulbs below.

"#63" LED Light Bulb

Description: One 6V LED Bulb for negative or positive ground.

This bulb includes the globe and is used on Model A Ford and other 6V vehicles with positive or negative chassis. This bulb radiates light in all directions like the incandescent it replaces. It is perfect for single filament tag/running lights on Model A Fords where the competition's directional LED lights will not work correctly. This bulb is typically used for:

- cowl lights
- parking lights
- running lights
- tag lights
- dash lights
- instrument lights
- dome lights

Not for use as a brake light. The #63 type bulb is used for running lights and is supposed to be dimmer than the brake light.

This bulb works in any 6V vehicle in place of a #63 incandescent.

Item Number: 236-006-63

Price: \$9.95

"#1129" LED Light Bulb

Description: One 6V LED Bulb for negative or positive ground.

This bulb has a metal protection frame and is used on Model A Ford and other 6V vehicles with positive or negative chassis. This bulb radiates light in all directions like the single filament incandescent it replaces. This single intensity bulb is typically used for:

- brake lights

Not for use as a running or parking light. The #1129 type bulb is used for brake lights and is supposed to be significantly brighter than the running light.

This bulb works in any 6V vehicle in place of a #1129 incandescent.

Item Number: 236-006-1129

Price: \$17.95
